Senior UI Engineer

Job Description

International company from Dublin, Ireland is looking for a senior front end web developer who understands the architecture of the web and has a proven track record in solving challenging UI problems with elegance and pragmatism. You will be working in an agile environment with an international team across Europe and North America, taking part in feature planning sessions, iterating fast and interacting with requirement, design and QA teams.

The Team

If you thought enterprise software is boring, think again. By joining us, you will be working with some of the latest technologies with the end result of your workbeing directly experienced by thousands of users worldwide and will shape and transform the service and maintenance industry. You will experience a creative and fast-paced environment at every stage of development, from requirements gathering to QA and finally deployment. If you value challenging problems, autonomy and ownership of projects, then join our development team.

Responsibilities

• Front-end engineering and implementation of highly interactive user interfaces to ensure a superb user experience
• Work closely with product management to understand requirements and design of new product features.
• Architect & implement solutions throughout the development lifecycle, from requirements all the way to deployment
• Optimise performance of existing front end code
• Perform additional job-related duties as requested

Skills

• Expert in Javascript, CSS3, SASS and HTML5 with proven ability to implement complex UIs
• Experience with automated testing, Grunt / Gulp task automation
• Deep knowledge of javascript frameworks (either dojo or jQuery) and twitter bootstrap
• Willingness to learn / adapt when applying cutting edge frameworks to challenging UI/UX problems
• 4+ years of experience designing and building front end user interfaces with demonstrable body of work
• Ability to work in medium-sized teams and deliver under tight deadlines
